How do I connect to an SFTP server with FileZilla?

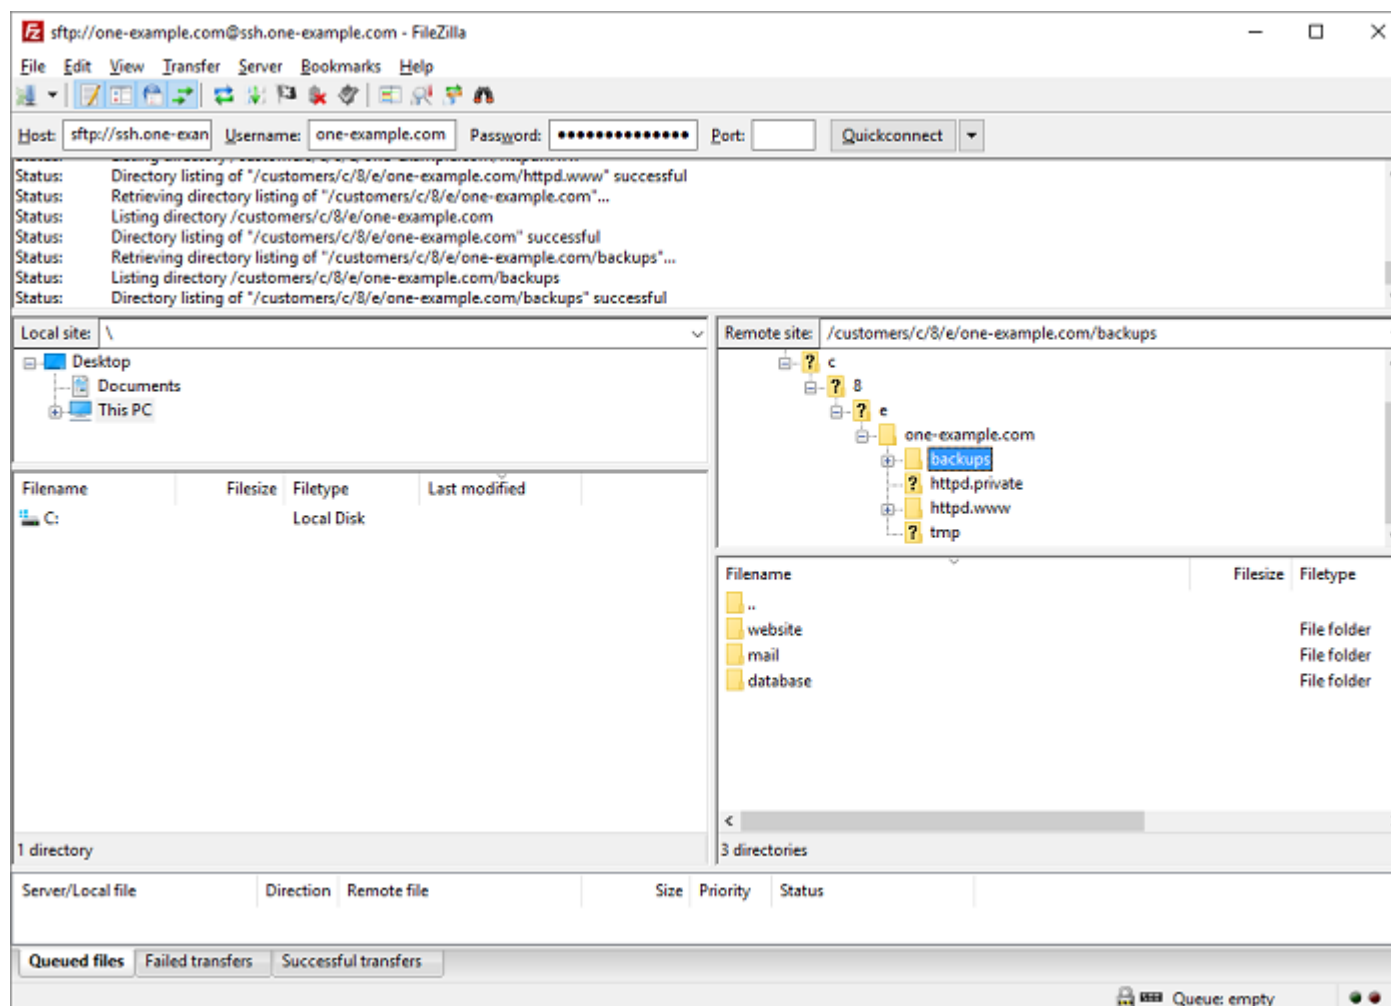

Before you can login with SFTP, you need to activate [SFTP](#) or [SSH](#) access in your One.com control panel.

1. Open **FileZilla**
2. Enter the address of the server in the field **Host**, located in the **Quickconnect** bar.
 - (sftp.example.com - make sure to enter **sftp** to connect securely via SFTP)
3. Enter your username
 - (example.com - keep it lowercase and without "www.")
4. Enter your password
 - (the one you chose for SSH in your Control Panel)
5. Enter the port number.
 - (port **22** for SFTP)

Help

- Click on **Quickconnect** or press **Enter** to connect to the server.
- Click **OK** when you get a warning about an unknown host key.

Note: Remember to replace example.com with your own domain.
