

## How to check the URL of current git repository with TortoiseGit?

[Ask Question](#)

★ I am new to git and have currently switched from Bitbucket to Github, but have not yet deleted the Bitbucket repository. I have a folder in my computer, but am unsure whether that folder is from the github or the bitbucket repository. Is there a way I can check the URL of the repository with TortoiseGit, and if so how?

5 Git is a decentralized version control system and, thus, can

have multiple remote repositories for a working tree.

The configured ones can be seen in TortoiseGit settings -> Git -> Remotes (cf. <https://tortoisegit.org/docs/tortoisegit/tgit-dug-settings.html#tgit-dug-settings-remote>).

Go to your project folder and open the .git/config file.

8

There you can see the remote urls.

When you use windows than you have the git bash and vim ;) use that. – René Höhle Jun 22 '17 at 21:24

Actually any decent Windows text editor works (e.g. Notepad++) – sonyisda1 Jul 20 '18 at 12:38

I think that in the 'fetch' dialog, there is a 'manage remotes' link.
