```
1 some tag: 11
2 some tag: 22
3 some tag: 33
4 some tag: 44
5 some tag: 55
6 some tag: 66
7 some tag: 77
8 some tag: 88
9 some tag: 99
10 some tag: 1010
11 some tag: 1111
12
```

Just input the regex text and then press Alt+Enter, It can select all the matched text in multiline mode, then I can edit, copy and paste them at anywhere I want.

How can I reproduce this in vscode or does vscode support for this?
