

How do I change the IP address in XAMPP for Windows?

- I've been trying to figure out how I can change my server config for XAMPP so that it doesn't have a memory fault when both Windows and the server are trying to access `localhost` at the same time. Basically I want XAMPP to be IP of 127.0.1.1 or something similar so it doesn't interfere with the `localhost` used by the system so I can browse the web and my websites that I'm developing. What is happening is that if I have XAMPP and Eversoft's first page 2000 v2.0 running at the same time, I'll get a BSOD (blue screen of death) in the middle of editing my sites. This is an intermittent problem, but always happens with these two programs.

you want. Make sure you place : between the ip address and port number, in this case it was port 80.

How Change "127.0.0.1" in Xampp To "127.0.0.2" (or paste your favorite ip instead 127.0.0.2)

```
(C:\xampp\apache\conf\httpd.conf) --- Listen 80 --- Listen
127.0.0.2:80
(C:\xampp\apache\conf\extra\httpd-ssl.conf) --- Listen 443
--- Listen 127.0.0.2:443
(C:\xampp\php\php.ini) --- ;xdebug.remote_host =
"127.0.0.1" --- ;xdebug.remote_host = "127.0.0.2"
(C:\xampp\phpMyAdmin\config.inc.php) --- $cfg['Servers']
[$i]['host'] = '127.0.0.1'; --- $cfg['Servers'][$i]['host'] =
'127.0.0.2';
```

How Change "Localhost" in Xampp To "myhost" (or paste your favorite name instead myhost)

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

```
(C:\xampp\apache\conf\httpd.conf) --- ServerName
localhost:80 --- ServerName myhost:80
(C:\xampp\php\php.ini) --- ; SMTP = localhost --- ;
SMTP = myhost
(C:\Windows\System32\drivers\etc\HOSTS) ---
127.0.0.1 localhost --- 127.0.0.2 localhost
127.0.0.2 myhost >>> #(next line after 127.0.0.2
localhost)
```

These are the steps to follow when you want your PHP application to be installed on a LAN server (not on web)

1

1. Get the internal IP or Static IP of the server (Ex: 192.168.1.193)
2. Open XAMPP>apache>conf>httpd.conf file in notepad
3. Search for Listen 80
4. Above line would read like- #Listen 0.0.0.0:80 / 12.34.56.78:80
5. Change the IP address and replace it with the static IP
6. Save the httpd.conf file ensuring that the server is pointed to #Listen 192.168.1.193:80
7. In the application root config.php (db connection) replace localhost with IP address of the server

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

Control Panel>Windows Firewall>Allow a program to communicate through windows firewall>Add another program Name: http Port: 80 Add one more as http - 8080

If IIS (Microsoft .Net Application Internet Information Server) is installed with any Microsoft .Net application already on server, then it would have already occupied 80 port. In that case change the #Listen 192.168.1.193:80 to #Listen 192.168.1.193:8080

You can point 127.0.1.1 to 127.0.0.1 in your windows hosts file (Windows/system32/driver/etc)

doesn't this just make the same problem show up? – [user1493559](#) Jun 30 '12 at 21:39

Yes, i think... sorry – [Alex L.](#) Jun 30 '12 at 21:42
