In sublime 3? THeres no such option. Maybe you have it with some plugin?

The option mentioned by **@jackeroo** is a command added to the menu by Package Control; it opens up the command palette with a predefined filter for all Package Control commands, and `Package Control: List Packages` is one of the items.

If you don't have Package Control installed, you won't see that item in the menu and your command palette will not contain any `Package Control:` commands.

If you got the latest build of Sublime Text 3:

Tools → Install Package Control

Otherwise, have a look at **the installation page**.

The file that contains a list of installed packages is located at

`~/Library/Application Support/Sublime Text 3/Packages/User/Package Control.sublime-settings`

Just thought I'd drop that here in case somebody wanted to have the list in that format.

Actually there is and it is quite simple:

1. Ctrl+Shift+P
2. Type Package Control: Remove Package
3. You see the list of all packages installed.
